AVIATION Ai

TRAY HANDLING
(1 month)

Calculating tray density and redirecting passengers to other bays.

PASSENGER DENSITY
(1 month)

Depicting a passenger density model to assist the previous model.

LUGGAGE TRACKING
(1 month)

Track current location of luggage to allow live tracking & ETA for passengers

FIELD TESTING
(1 month)

All the hardwork comes down to testing!

PROJECT OVERVIEW

Student-Driven Innovation Hub

advacing practical AI solutions in the aviation industry

Airport Security Efficiency Goal

estimating 10,000+ users

Outcomes and Impact

Improving passenger experience by maintaining Compliance.

AVIATION Ai

AVIATION Ai

SOME STATS ON CURRENT SCENARIOS

18%

improvement in passenger throughput per hour at peak times

~450

passengers processed per checkpoint per hour

~20 minutes per hour - Lane idle or underutilized time
